

1968 Norton Commando Wiring Schematic + Boyer Bransden Micro MKIII / MKIV Electronic Ignition - with 12 volt coils in parallel

Grant Tiller October 2025

Removed factory points and condensers.
Added Boyer Bransden Micro IV electronic ignition - note this schematic shows two twelve volt coils wired in parallel as opposed to the more common and recommended configuration of two six volt coils wired in series.

Standard wiring is Positive Earth - that is to say RED (POSITIVE) cable goes FROM the battery TO the frame.
